

Installation of Reinforcement at Hayfields Gold Course for PGA Champions Tour Tournament

Location: Hayfields Golf Course, Maryland, USA

Product: Turf Reinforcement (TR) Mesh

Project: Installation of reinforcement mesh for temporary overspill car parking needs

The Problem

As host to one of the PGA TOUR's which features the world's premier golfers age 50 and up, Hayfield's Golf Course knew that it would need to prepare overspill parking spaces to accommodate the sold out attendance for the star studded Constellation Energy Classic golf tournament.

The Solution

Turf Reinforcement Mesh (TR) was installed to give protection from wheel rutting and grass root damage to areas designated for overspill parking.

The Conclusion:

The tournament, which was covered by the Golf Channel, was a huge success. Parking was not an issue, and after the tournament's seven days of the in-and-out of parked cars, pick-up trucks, television camera vans, and golf-carts on the grass, the TR mesh delivered its promises of protecting the grass and preventing wheel rutting.
